## Protein Pharmacokinetics and Metabolism

Investigation of the pharmacokinetics and metabolism of human proteins has escalated over the last two decades because of the use of recombinant human proteins as therapeutic agents. In addition, the development and improvement of analytical techniques enabling the detection of minute quantities of proteins in biological

matrices have aided this process.

## **Pharmacokinetics and toxicology of therapeutic proteins ...**

Significant progress has been made in understanding pharmacokinetics (PK), pharmacodynamics (PD), as well as toxicity profiles of therapeutic proteins in animals and humans, which have been in commercial development for more than three decades. However, in the PK arena, many fundamental questions remain to be resolved.

Figure 1. Simplified scheme depicting the relationship of the intrinsic and extrinsic coagulation pathways and the fibrinolysis pathway. Roman numerals refer to individual coagulation factors, and tPA, UK, SK, and APSAC refer to tissue plasminogen activator, urokinase, streptokinase, and anisoylated plasminogen streptokinase activator complex, respectively.
